DevMountain

July 2018 - January 2019

Field of Study: Web Development

University of North Carolina at Greensboro

BA

SUMMARY

Former Growth and Development Lead transitioning into Software Engineering Role. Excited to utilize my skills and previous work experiences. Thriving on challenges, refactoring, and bringing ideas to life. Looking forward to making meaningful contributions by executing clean efficient code.

PROJECTS

BRANCHES

<https://github.com/WON3/Branches>

Group Developed
Dec 2018 - Present

Description: Collaborative story building application. Allows users to do the following: create a new story, add to an existing story, read a completed story.

Technologies used: React.js, Node.js, SQL, Material ui

D-LOW

<https://github.com/estott10/dlow>

Personally Developed
October 2018 - December 2018

Description: Vehicle search site that allows users to build multiple car profiles based on select criteria. This search will render a list of vehicles. Each vehicle is linked to YouTube and will show a list of available reviews matching the make and model of the vehicle.

Technologies used: React.js, Node.js, SQL

HOUSER

<https://github.com/estott10/houser>

Personally Developed
Oct 2018 - Nov 2018

Description: Real Estate application that allows users to enter search filters such as location and price. The search produces a list of houses that match the desired criteria.

Technologies Used: React, Node
